DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-24, drawn to a system and method for determining characteristics associated with a communication channel including identifying correlation peaks in a magnitude of frequency domain correlation information to determine locations of discontinuities of the channel, classified in class 375, subclass 224.
 - II. Claims 25 and 26, drawn to a system and method for determining characteristics associated with a communication channel including examining phase information associated with frequency domain correlation information to determine a type of a discontinuity of the channel, classified in class 375, subclass 224.
 - III. Claims 27-37, drawn to a stimulus-response system and method for determining characteristics associated with a communication channel where a narrowband stimulus signal is generated, classified in class 375, subclass 224.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility from invention II such as in a system where a type of a located discontinuity is determined from an amplitude of an identified correlation peak instead of from phase information. Further, inventions I and II have separate utility from invention III such as in a system where a wideband stimulus signal is used instead of a narrowband stimulus signal. See MPEP § 806.05(d).

Art Unit: 2637

3. Because these inventions are distinct for the reasons given above and the text search required for each Group is not required for the remaining Groups, restriction for examination purposes as indicated is proper.

4. A telephone call was made to Andrew Bateman on 2/9/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David B. Lugo whose telephone number is 571-272-3043. The examiner can normally be reached on M-F; 9:30-6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jay Patel can be reached on 571-272-2988. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
